EDUCATION

Sir M. Visvesvaraya Institute of Technology, Bengaluru — **Expected 2027**
B.E. in Artificial Intelligence & Machine Learning — **CGPA: 8.72/10**

EXPERIENCE

Chiacon Consulting Private Limited — **Mar 2026 – Jun 2026**
AI Engineer Intern — Remote, India

- Built an autonomous voice-based AI interviewer using **LangGraph and Azure OpenAI**, implementing a **9-node state machine** with CV/JD-driven interview planning, conditional routing, and deterministic stage, strike, topic, and project-repetition controls.
- Engineered an adaptive real-time voice interaction pipeline in **Python** with state-aware silence calibration, grammatical-boundary detection, rolling speaker-pacing adjustment, and a two-pass STT correction layer for technical jargon.
- Designed and implemented a **multi-agent evaluation system** with a skill pre-filter and parallel Technical, Behavioral, and Integrity evaluators using `asyncio.gather()`, producing schema-validated, evidence-based candidate scorecards.
- Implemented bounded conversational memory that preserves recent working context while compressing older dialogue into structured content and behavioral summaries, controlling context growth during extended interviews.
- Built the real-time **Teams integration layer** using Recall.ai, FastAPI WebSockets, and Azure Speech SDK, streaming meeting audio through continuous STT/TTS pipelines with software echo suppression and automated interview reporting.

SKILLS

AI & Agent Engineering: Agentic AI, LangGraph, LangChain, LLM Applications, RAG, MCP, Prompt & Context Engineering, Structured Outputs, LLM Evaluation, Evaluation Harnesses, Guardrails, Fine-Tuning (QLoRA/PEFT)
Programming & ML: Python, SQL, TypeScript, Java, Hugging Face Transformers, Scikit-learn, Feature Engineering, Model Evaluation
Backend & Data: FastAPI, REST APIs, PostgreSQL, Supabase, pgvector, FAISS, NetworkX, Graph Algorithms
Systems & Tools: System Design, Asynchronous Workflows, WebSockets, SSE, GitHub Actions, Docker, LangSmith, Git

PROJECTS

GitNova – Open-Source Contribution Intelligence Platform — Live | GitHub

- Built and deployed an automated code-intelligence pipeline that ingests GitHub issues, retrieves repository context, and generates grounded issue investigations, with GitHub Actions automating scheduled runs twice daily.
- Architected hybrid code retrieval using **Jina code embeddings, PostgreSQL Full-Text Search, and Reciprocal Rank Fusion (RRF)**, with Tree-sitter-aware code indexing for repository retrieval.
- Built a deterministic **GroundingVerifier** that cross-checks LLM-generated file and symbol citations against repository evidence and blocks unsupported outputs through a fail-closed publication pipeline.
- Built an automated rolling **RAG evaluation pipeline** in GitHub Actions that uses merged GitHub pull requests as retrieval ground truth, enabling reproducible measurement of retrieval quality across real-world issues.

Stack: Python, FastAPI, Jina Embeddings, PostgreSQL, pgvector, Tree-sitter, GitHub Actions, RRF

Unshell – AML & KYB Forensic Intelligence Graph — *Hackfest 2026 – 2nd Runner-Up* | GitHub

- Architected an **8-node LangGraph workflow** that combines UK Companies House data with recursive ownership traversal and unstructured corporate filings to uncover hidden beneficial ownership.
- Built a targeted **document RAG pipeline** that retrieves relevant legal filing evidence for structured ownership extraction from complex corporate PDFs.
- Engineered a **Zero-Trust Grounding Firewall** using RapidFuzz to verify LLM-extracted entities and ownership evidence against source text, filtering unsupported claims before downstream analysis.
- Developed a deterministic **NetworkX risk engine** that analyzes verified ownership graphs for circular structures, nominee pass-throughs, and other AML typologies, with integrated OFAC sanctions screening.

Stack: Python, LangGraph, FastAPI, PyMuPDF, FAISS, Sentence-Transformers, RapidFuzz, NetworkX, SQLite

Veridian – Enterprise AI Workflow Automation Platform — GitHub

- Built a **dual-graph LangGraph system** that turns meeting transcripts into validated, actionable work through parallel enterprise checks, conditional routing, and human approval.
- Engineered a **Human-in-the-Loop control flow** with LangGraph pause/resume, database-backed idempotency, and deterministic safeguards for ambiguous or repeated agent actions.
- Integrated policy retrieval and live enterprise systems into parallel compliance checks, combining document evidence, HR availability, and Jira workload state before deciding how each task should be handled.
- Built the **FastAPI–Next.js execution layer** with real-time SSE updates, resilient LLM/API failure handling, and Jira, Slack, and GitHub integrations for task execution and lifecycle tracking.

Stack: Python, LangGraph, FastAPI, Gemini, NVIDIA NIM, Supabase, pgvector, Jira API, Slack API, GitHub, SSE, LangSmith

ACHIEVEMENTS & CERTIFICATIONS

- **Hackfest 2026:** 2nd Runner-Up – Top 50 / 750+ teams
- **Amazon ML Challenge 2025:** Top 15% among 10,000+ teams
- **NPTEL:** Mathematical Foundations for Machine Learning – Elite Silver (IIT Guwahati)
- **Oracle Certified:** Generative AI Professional, Data Science Professional, Database@AWS Foundations Associate
