BANDA SRI HARI

Bengaluru, India | +91 81257 52880 | sriharizbett@gmail.com | github.com/sriharizz | linkedin.com/in/sri-hari-48321b297

EDUCATION

Sir M. Visvesvaraya Institute of Technology **Expected 2027**
B.E. in Artificial Intelligence & Machine Learning (CGPA: 8.72/10) *Bengaluru, India*

EXPERIENCE

Chiacon Consulting Private Limited **Mar 2026 – Jun 2026**
AI Engineer Intern — Conversational AI & Workflow Automation *Remote, India*

- Built an automated document-intelligence pipeline using PyMuPDF and Pydantic to parse technical resumes and job descriptions, extracting domain skills and generating structured gap profiles for interview planning.
- Architected an 8-node stateful workflow in LangGraph with deterministic routing, conversation guardrails, and bounded memory compression to ensure reliable, multi-stage business interview execution.
- Designed an asynchronous multi-agent evaluation panel using `asyncio.gather()` that concurrently assesses candidates across Technical, Behavioral, and Integrity criteria before synthesizing composite ratings.
- Built an automated reporting pipeline that generates multi-page PDF candidate evaluation scorecards and synchronizes structured scoring data directly into centralized tracking workbooks.
- Engineered an automated testing harness simulating 7 candidate personas across 5 assertion checks to validate workflow reliability, anti-hallucination guardrails, and operational edge cases.

PROJECTS

Veridian WorkOS — Enterprise AI Workflow Automation Platform
Stack: Python, LangGraph, FastAPI, Human-in-the-Loop, Jira API, Slack API, Server-Sent Events, Supabase

- Architected a meeting-intelligence workflow platform in LangGraph that converts raw meeting discussions into structured, policy-validated action items and decision ledgers.
- Engineered a Human-in-the-Loop (HITL) approval gate using state checkpointing and Server-Sent Events (SSE), allowing managers to review, edit, and approve AI-extracted tasks before downstream execution.
- Integrated Atlassian Jira and Slack APIs to automate task creation, approval routing, and real-time execution tracking, establishing closed-loop alignment between discussions and issue trackers.
- Built automated validation checks verifying extracted task requirements against enterprise budget limits, organizational availability data, and security policies before dispatch.

GitNova — Open-Source Intelligence & Contribution Discovery Pipeline
Stack: Python, FastAPI, PostgreSQL, pgvector, Tree-sitter, Hybrid Retrieval, GitHub Actions, Docker

- Built an automated intelligence platform that ingests, filters, and analyzes unstructured GitHub issues across 153 production repositories to identify viable task opportunities.
- Engineered a hybrid retrieval pipeline combining dense semantic vector search and full-text search over 41,000+ code chunks to ground task recommendations in verified repository evidence.
- Implemented a fail-closed 10-gate publication firewall that rejects 91.8% of ambiguous or ungrounded candidate tasks, protecting contributors from unfeasible work.
- Designed an automated evaluation pipeline using GitHub Actions to continuously benchmark recommendation retrieval accuracy and maintain data integrity.

Unshell — Forensic AML & KYB Intelligence Graph
Hackfest 2026 – 2nd Runner-Up | **Stack:** Python, FastAPI, LangGraph, NetworkX, PyMuPDF, FAISS, RapidFuzz

- Built an automated intelligence system that ingests UK Companies House corporate filings and registry data to resolve complex beneficial ownership structures and support compliance decisions.
- Engineered a deterministic NetworkX risk engine implementing cycle detection and 11 rule-based typologies to uncover hidden nominee directors, shell company layers, and circular control loops.
- Designed a multi-stage grounding pipeline using PyMuPDF and sentence embeddings to extract ownership percentages from legal filings and cross-reference them against US Treasury OFAC sanctions lists.
- Awarded 2nd Runner-Up at Hackfest 2026 (Top 50 / 750+ teams) for delivering explainable, evidence-anchored corporate risk summaries for compliance analysts.

TECHNICAL SKILLS

AI Fluency & Workflows: Generative AI, LLMs, LangGraph, Human-in-the-Loop (HITL), Agentic Workflows, Structured Outputs (Pydantic), Prompt Engineering, Guardrails, RAG (Retrieval-Augmented Generation)
Data Analysis & Information Gathering: Python, SQL, Pandas, NumPy, Data Extraction (PyMuPDF, REST APIs), Pattern Recognition, Full-Text Search, Automated Reporting, Excel / Ledger Tracking
Enterprise Tooling & Integrations: FastAPI, REST APIs, Webhooks, Jira API, Slack API, Microsoft Graph API, Docker, Git, GitHub Actions (CI/CD)
Project Management & Quality: Agile Workflow Support, Automated Regression Testing, Pytest, Audit Trails, Failure Diagnostics, Data Integrity Validation

ACHIEVEMENTS & CERTIFICATIONS

- **Hackfest 2026: 2nd Runner-Up** — Top 50 / 750+ teams (Unshell: Forensic graph intelligence & compliance analytics)
- **Amazon ML Challenge 2025:** Top 15% among 10,000+ national teams
- **NPTEL Elite Silver:** Mathematical Foundations for Machine Learning (IIT Guwahati)
- **Oracle Certified:** Generative AI Professional, Data Science Professional, Database@AWS Foundations Associate
