EDUCATION

Sir M. Visvesvaraya Institute of Technology, Bengaluru — **Expected 2027**
B.E. in Artificial Intelligence & Machine Learning — **CGPA: 8.72/10**

EXPERIENCE

Chiacon Consulting Private Limited — **Mar 2026 – Jun 2026**
AI Engineer Intern — Remote, India

- Built and evaluated an **enterprise AI screening/interview system** using Python, LangGraph, and Azure OpenAI, engineering an **8-node state machine** with bounded memory compression for unstructured multi-turn dialogue.
- Designed an asynchronous **LLM-as-a-Judge evaluation pipeline** with concurrent Technical, Behavioral, and Integrity evaluators, reducing evaluation latency by **∼65% (13.5s → 4.5s)** using `asyncio.gather()`.
- Built a **690-line automated evaluation harness** simulating **7 synthetic candidate personas across 5 assertion checks** to benchmark stage progression, anti-hallucination behavior, empathy handling, and audio SDK edge cases.
- Engineered data-cleaning and reliability controls using **two-pass STT jargon correction, RapidFuzz matching, dynamic pause-pacing (0.7×–1.4×), and 3-strike deflection/injection guardrails**.
- Integrated real-time speech and application data using **Microsoft Graph API, Azure Communication Services, and Azure Speech SDK**, generating structured ReportLab assessment scorecards.

SKILLS

Data Science & Analytics: Python, SQL, Pandas, NumPy, EDA, Data Cleaning, Feature Engineering, Probability & Statistics, Hypothesis Testing, Benchmarking, Matplotlib, Seaborn
Machine Learning: Scikit-learn, PyTorch, Supervised & Unsupervised Learning, Regression, Classification, Clustering, Forecasting, Cross-Validation, Precision, Recall, F1, ROC-AUC, MRR, Error Analysis
Generative AI & NLP: Azure OpenAI, LLMs, RAG, Dense/Sparse Embeddings, Prompt Engineering, LLM-as-a-Judge, LangGraph, LangChain, Hugging Face Transformers, QLoRA, PEFT, Guardrails
Engineering & Cloud: FastAPI, PostgreSQL, Supabase, pgvector, FAISS, SQLite, REST APIs, WebSockets, Pydantic, Azure, Docker, Git, GitHub Actions, LangSmith

PROJECTS

GitNova – Machine Learning, Retrieval & Code Intelligence Platform — Live | GitHub

- Built and deployed an end-to-end ML platform, curating a supervised dataset of **600 human-annotated GitHub issues across 50 repositories**, with text cleaning, context truncation, deduplication, repository-level **70/15/15 train/validation/test splitting**, and automated deployment workflows using GitHub Actions.
- Conducted systematic **EDA and slice-based error analysis**, identifying performance degradation on long-context issues (**78.4% accuracy**) and analyzing multi-language and code-block-free issue slices.
- Developed and benchmarked **TF-IDF + Logistic Regression** and **Qwen2.5-Coder + QLoRA** classifiers; held-out testing achieved **82.2% accuracy / 79.4% Macro-F1**, outperforming the TF-IDF baseline (**52.6% Macro-F1**).
- Engineered **10+ lexical and AST-derived features** for Quality and Difficulty scoring and hybrid dense+sparse retrieval using **768-dimensional embeddings** with Reciprocal Rank Fusion (**RRF, k = 60**).
- Built an automated **RAG evaluation benchmark** using merged PR diffs as ground truth, measuring Hit@K, Recall@K, MRR, and latency; rolling evaluation achieved **71.4% Recall@10** with programmatic citation grounding to prune hallucinated file paths.

Stack: Python, SQL, Pandas, NumPy, Scikit-learn, PyTorch, QLoRA, Tree-sitter, PostgreSQL, pgvector, FAISS, GitHub Actions

Unshell – AML & KYB Graph Analytics & Forensic Intelligence — *Hackfest 2026 – 2nd Runner-Up* | GitHub

- Led backend development for a **4-person team**, building an ETL and graph intelligence pipeline transforming unstructured corporate filings into structured entity graphs using Python and NetworkX.
- Built a **4-stage Hyper-RAG pipeline** using PyMuPDF, FAISS, and sentence-transformers to extract ownership and director relationships from **50+ page filings**.
- Engineered a **zero-trust verification firewall** using RapidFuzz similarity against source text and a mathematical risk engine using NetworkX cycle detection with SQLite OFAC screening.

Stack: Python, NetworkX, FAISS, RapidFuzz, SQLite, LangGraph, FastAPI, Sentence-Transformers, React Flow

Veridian – Enterprise AI Workflow & Observability Platform — GitHub

- Architected a **dual-graph LangGraph orchestrator** with a **12-node meeting pipeline and 5-node async tracking loop**, converting unstructured discussions into validated business actions with Human-in-the-Loop checkpointing.
- Engineered parallel validation across **HR SQL records, 1024-dimensional pgvector RAG, and live Jira APIs** using a custom state reducer.
- Implemented reliability controls including **LangSmith tracing, idempotent webhooks, exponential backoff retries, and finite-loop guardrails**.

Stack: Python, SQL, LangGraph, FastAPI, Azure OpenAI, Supabase pgvector, Jira API, Slack API, SSE, LangSmith

ACHIEVEMENTS & CERTIFICATIONS

- **Amazon ML Challenge 2025:** Top 15% among 10,000+ teams
- **Hackfest 2026:** 2nd Runner-Up – Top 50 / 750+ teams
- **NPTEL:** Mathematical Foundations for Machine Learning – Elite Silver (IIT Guwahati)
- **Oracle Certified:** Generative AI Professional, Data Science Professional, Database@AWS Foundations Associate
